## Comments

This is a starter handbook for your use. It is not complete by any stretch of the imagination and is intended to help you get started building your own handbook. You can add and delete as you wish. The idea is to get you started on something you can continue to build on and share with others. Hopefully at some future date all can be brought together for the benefit of all who use this handbook. Forward any sites you feel should be added to me at [ben.benavides@gmail.com](mailto:ben.benavides@gmail.com).

This is a living document and at the time of publication all links were active. But we all know the chaotic nature of the WEB and over time some sites will be pulled off or no longer function. Please report broken/inactive links to me so I can continue to update the guide.

I realize also that we don't think alike. If you feel some links do not belong in a particular category let me know and I will make the adjustments. If you feel a new category should be added please justify it, and if you discover links that you think are relevant to the handbook please submit your list and I will update. Together we can create a valuable guide that is not only useful to the intelligence analyst but also beneficial to all branches of the military, and civilian agencies. The idea is to develop something that any branch (infantry, artillery, armor, etc) besides MI can use for their own intelligence gathering. Remember, "Every Soldier Is A Sensor".

While I have tried to get you to your objective as quickly as possible, there is still no substitute for effective searching techniques. I strongly recommend looking over this very basic WEB searching techniques site <http://www.lib.berkeley.edu/TeachingLib/Guides/Internet/Handouts.html> and download the tutorial with powerpoint slides and handouts.

There are two areas one cannot get away from on the WEB, pornography and political agendas. I have definitely made sure that none of the links end up with the former, but the latter cannot be avoided.

I have been advised that I probably have published too much information and have made it easier for the criminal element. All the information gathered has been through open source harvesting and anyone with even the slightest knowledge of good search techniques will be able to gather the same information. For example, the nuclear related portions in this handbook when merged together will produce a neat little file. You can gather this same information at the public library or by visiting several blogs and merging the results.

***Those links that require a .mil or .gov return address are included for those authorized access, they will not work for those not authorized access.***

Prior to leaving the service of the U.S. Army I established that this is my intellectual property and there are no applicable constraints on my sharing it with the public.

## Open Source Intelligence (OSINT): What It Is and What It Isn't

According to the [NATO Open Source Intelligence Handbook](#), November 2001, there are four distinct categories of open source information and intelligence.

1) **Open Source Data (OSD)**. Data is the raw print, broadcast, oral debriefing, or other form of information from a primary source. It can be a photograph, a tape recording, a commercial satellite image, or a personal letter from an individual. A good example is a reporter embedded with forces in Afghanistan or Iraq. He/she is taking pictures, talking to soldiers, recording conversations and firefights, and taking notes with a pen or pencil. This is considered raw data until it goes through a conversion process to create a coherent product.

2) **Open Source Information (OSI)**. OSI is comprised of the raw data that can be put together, generally by an editorial process that provides some filtering and validation as well as presentation management. OSI is generic information that is usually widely disseminated. Newspapers, books, broadcasts, and general daily reports are part of the OSI world. An example is a reporter embedded with forces who takes the raw data and converts it into a meaningful article that is printed in newspapers, magazines or broadcasted over the air waves. OSI is what a Soldier would purchase at the bookstore inside the Post Exchange in the form of USA Today or Newsweek.

3) **Open Source Intelligence (OSINT)**. OSINT is information that has been deliberately discovered, discriminated, distilled, and disseminated to a select audience, generally the commander and his/her immediate staff, in order to address a specific question. In the case of a battlefield commander, it would more than likely be answering the priority intelligence requirements (PIR) or specific orders or requests (SOR). OSINT, in other words, applies the proven process of intelligence to the broad diversity of open sources of information, and creates intelligence. Example: The meaningful article above (OSI) that was created from raw data is used to support an operation. It's quite possible that a photo accompanying the article may be of a house known to harbor insurgents. The photo in the article identifies the location and now can be used to support a tailored operation to attack the insurgents.

4) **Validated OSINT (OSINT-V)**. OSINT-V is information to which a very high degree of certainty can be attributed. It can only be produced by an all-source intelligence professional, with access to classified intelligence sources, whether working for a nation or for a coalition staff. It can also come from an assured open source to which no question can be raised concerning its validity (live video of an aircraft arriving at an airport that is broadcast over the media). OSINT-V is OSINT for which there are either confirming or unavailable classified sources or there are no available classified sources disputing OSINT. OSINT-V is produced only when the analyst has access to classified sources.

Example: CNN reporter takes photos and reports on a bridge. Intelligence personnel are aware the bridge is vital for the movement of insurgent supplies; however, CNN is unaware of that. Classified information confirms that such a bridge exists. This in effect validates the reporting as OSINT-V, especially if the bridge is identified to be destroyed to keep insurgents from moving supplies. But, if there isn't anything in the classified holdings to deny the existence of the bridge, it is still considered OSINT-V since this is the first time the bridge has been observed and reported, and there are other sources like other reporters to backup the findings.

People in the intelligence business are realists and know that everything cannot be monitored simultaneously; construction of new infrastructure is continuously taking place around the world. We cannot keep track of new buildings, bridges, roads or airfields being built. This is what makes open source reporting extremely valuable. It covers the areas the classical "INTS" are not assigned to cover. The only time OSINT-V can be disputed is when there is confirming evidence to deny the information.

Summary: How do I know when I have OSINT? The simple answer is the analyst does not have OSINT until the open source information has been processed and analyzed, and supports a specific

requirement. The specific requirement can be a tailored operation or simply answering a question. The analyst has to be very careful when it comes to distinguishing between OSI and OSINT. Open source information exploitation is exactly what the name implies, that which is gathered/collected from open sources. In general, it is information that is available to the general public without restrictions unless it is copyrighted material. These include newspapers, the internet, books, phone books, scientific journals, radio broadcasts, television, individuals, and other forms. On the other hand, OSINT is an intelligence gathering discipline that involves collecting information from open sources and analyzing it to produce usable intelligence, and there isn't anything that says intelligence must be classified in order for it to have utility. In the Intelligence Community, the term "open" refers to overt, publicly available sources (as opposed to covert or classified sources); it is not related to open-source software. OSINT is distinguished from straight research in that it applies the process of intelligence to create tailored knowledge supportive of a specific decision by a specific individual or group.

## How To Use Open Source Intelligence

By eHow Culture & Society Editor [http://www.ehow.com/how\\_2126848\\_use-open-source-intelligence.html](http://www.ehow.com/how_2126848_use-open-source-intelligence.html)

Open source intelligence is a process of information gathering from public and overt sources, such as newspapers and military trade journals, that produces "actionable intelligence." Far from being the hobby of amateurs, open source intelligence is used by official military and government intelligence agencies on a regular basis.

1. Gather sources. The number of possible open source intelligence outlets is limitless. Some basic ones are newspapers, which report on things like troop and fleet movement, and even civilians who visit other countries and can make relevant observations upon return. Strategy and defense information websites, such as Jane's Group, also provide high quality information for you to harvest.
2. Pick a region or topic. Monitoring all varieties of open source intelligence across regional and topical interests takes huge amounts of manpower. To effectively use open source intelligence you should focus on one region or issue at a time. This will help you to stay on top of the latest information and will allow you to develop a background understanding of intelligence items.
3. Connect the dots. Once you have gathered your sources you need to monitor news and information in order to connect the dots. Look, for example, at how heads of state visits coincide with arms sales. Then consider troop and fleet movement against rising tensions in various regions. Use widely available technology such as Google Earth to get views of important locations. Take all this kind of information and try to deduce the most likely intelligence information from it.
4. Test your theories. One of the best ways to test a theory that you've constructed on the basis of open source intelligence is to publish the theory. You can post theories on strategy discussion forums or you can send your piece to influential military bloggers or even newspapers. Check the responses from other members of the open source intelligence community to see what the criticisms might be.

## MiningThe Internet For Intelligence

How much data is on the internet that can be used for open source intelligence purposes? We are looking at approximately 5 million terabytes. Just how big is a terabyte? Let's start with the basics and work our way up.

**Bit:** A Bit is the smallest unit of data that a computer uses. It can be used to represent two states of information, such as Yes - No or 0 - 1.

**Byte:** A Byte is equal to 8 Bits. 1 Byte could be equal to one character. 10 Bytes could be equal to a word. 100 Bytes would equal an average sentence.

**Kilobyte (KB)** = approximately 1,000 bytes

A kilobyte (KB) is normally defined as 1,000 bytes. Technically, a kilobyte is actually 1,024 bytes which is 2 to the 10th power (1,024) bytes.

**Kilobit** = approximately 1,000 bits

A kilobit is different than a Kilobyte. A kilobit is approximately 1000 bits while a Kilobyte is approximately 1000 bytes.

**Megabyte (MB)** = approximately 1,000 KB or 1,000,000 bytes

Technically a Megabyte is 2 to the 20th power (1,048,576) bytes.

**Megabit** = approximately 1,000 kilobits = 1,000,000 bits

In data communications, a kilobit is a thousand bits (or 1,000 bits) and a megabit is a thousand kilobits (or 1,000,000 bits). These are normally used for measuring the amount of data that is transferred in a second between two telecommunication points. Kilobits per second is usually shortened to kbps and megabit per second is abbreviated as mbps.

Bits in data communications are discrete signal pulses. For example, 28.8 kilobits per second (kbps) is 28,800 bits per second.

**Gigabyte** = approximately 1000 Megabytes = 1,000,000 Kilobytes = Billion bytes (1,000,000,000 bytes)

Technically a Gigabyte is 2 to the 30th power (1,073,741,824) bytes.

**Terabyte (TB)** = approximately 1,000 Gigabytes = 1,000,000 Megabytes = Trillion bytes

(1,000,000,000,000 bytes)

Technically a Terabyte is 2 to the 40th power (1,099,511,627,776) bytes

**Petabyte (PB)** = approximately 1,000 Terabytes = 1,000,000,000,000,000 bytes

Technically a Petabyte is 2 to the 50th power (1,125,899,906,842,624) bytes

**Exabyte (EB)** = approximately 1,000 Petabytes = 1,000,000,000,000,000,000 bytes

Technically an Exabyte is 2 to the 60th power (1,152,921,504,606,846,976) bytes

It is estimated that if you were to type up every word ever spoken by every human being ever to live in all of the history of the world, the resulting file would be between 2 and 5 Exabytes in size.

**Zettabyte** = 1000 Exabytes

**Yottabyte** = 1000 Zettabytes

**Brontobyte** = 1000 Yottabytes = 1,000,000,000,000,000,000,000,000 bytes = 1 followed by 27 zeros...

How big is 1 followed by 27 zeros? That would be the rough equivalent of the total number of atoms contained in all of the bodies of every person living in Indiana... give or take a few billion-trillion here and there...

Source: Shelbyville Central Schools at <http://www.shelbycs.org/technology/howbigisagigabyte.html>

Based on these figures, I opine that intelligence exists out there just waiting to be tapped. Oh, come on now, you do have search engines to help research that data; it's only 5+ million terabytes! Lots of data but guess what, even Google which is considered currently the best search engine, has only indexed about 170 terabytes. Now you know why I recommend using more than one search engine with good keywords to assist.

## Key Army Access Sites

NOTE: Several links require password access.

To access the MyIntelink from a government connection (.mil) go to <http://nipr.intelink.gov> and no password is required. For access from a non-government connection (home computer) go to <https://www.intelink.gov> and apply for a remote access account.

### US Army Intelligence Center Mission:

The United States Army Intelligence Center's mission is Leading, Training, Equipping and Supporting the world's premier corps of Military Intelligence Professionals who are imbued with a warrior spirit, self-discipline and mutual respect.

### The 304th Military Intelligence Battalion's Mission:

[https://icon.army.mil/anon/ikn\\_website/index.cfm?organization=304th%20MI%20Battalion](https://icon.army.mil/anon/ikn_website/index.cfm?organization=304th%20MI%20Battalion)

The 304th Military Intelligence Battalion conducts officer training at the tactical and operational levels in support of Army, Joint, Interagency and Multinational Commands; producing competent MI professionals who are grounded in the warrior ethos and Army values and ready to deploy in support of an Army at war; simultaneously the Battalion ensures the welfare of Soldiers, civilians, and their families.

### Intelligence Knowledge Network (IKN):

<https://icon.army.mil/>

IKN is a Knowledge Management tool that enables Intelligence soldiers all over the world to communicate, collaborate and investigate. It hosts discussion forums, serves as a single point of entry to get to USAIC and other Intelligence Community websites, and hosts a variety of public and private web applications that support the Intelligence Community. In order to ensure that IKN continues to meet your needs, we encourage you to provide us with [feedback](#).

The Global Terrorism Database (GTD) is an open-source database including information on terrorist events around the world since 1970 (currently updated through 2004). Unlike many other event databases, the GTD includes systematic data on international as well as domestic terrorist incidents that have occurred during this time period and now includes almost 80,000 cases. For each GTD incident, information is available on the date and location of the incident, the weapons used and nature of the target, the number of casualties, and -- when identifiable -- the identity of the perpetrator.

## **BLOGS**

BLOGS, like social sites, are good sources of information harvesting for intelligence purposes if you have the time and patience, especially the time. Good keyword searching will cut down on the time you spend on BLOGS if your only reason for being there is to harvest information. It is very easy to get distracted though with all the videos that appear daily and you have to be focused on the task. I don't subscribe to them and I think that too much information is being passed around. A good analyst, foreign or domestic, can put together enough information from BLOGS to build a good intelligence file. However, I realize that people are not going to shut them down and too many folks out there want access to them.

### **CAMS Around the World**

*(why would CAMS be included in this handout? Imagine being told you have to deploy to a certain country to conduct an operation. You are told the weather is 40 degrees with a heavy overcast and it is drizzling. You can only imagine an image of what it looks like. However, with a weather cam of the area the image is vivid and in real time. Most major cities around the world have cams showing certain parts of the city which can be very helpful when planning an operation. They can show areas to avoid and roads that support your equipment.)*

| NationMaster (Welcome to NationMaster, a massive central data source and a handy way to graphically compare nations. NationMaster is a vast compilation of data from such sources as the CIA World Factbook, UN, and OECD. You can generate maps and graphs on all kinds of statistics with ease.) We want to be the web's one-stop resource for country statistics on everything from soldiers to wall plug voltages.   | <a href="http://www.nationmaster.com/index.php">http://www.nationmaster.com/index.php</a>   |
| StateMaster (A unique statistical database which allows you to research and compare a multitude of different data on US states. We have compiled information from various primary sources such as the US Census Bureau, the FBI, and the National Center for Educational Statistics. More than just a mere collection of various data, StateMaster goes beyond the numbers to provide you with visualization technology like pie charts, maps, graphs and scatterplots. We also have thousands of map and flag images, state profiles, and correlations.) We have stats on everything from toothless residents to percentage of carpoolers. Our database is increasing all the time, so be sure to check back with us regularly. | <a href="http://www.statemaster.com/index.php">http://www.statemaster.com/index.php</a>   |

## **Critical Thinking**

This free web-based training is provided as an introduction to Anacapa's scheduled and on-site courses in **intelligence analysis**. Upon completion of all three training modules, you may obtain a certificate of completion. Click on a link below to go to each module.

<http://www.anacapatraining.com/company/index.html>

[1. Introduction to Intelligence Analysis](#)

[\(1 to 2 Hours\)](#)

[2. Data Collection Tradeoffs](#)

[\(2-3 Hours\)](#)

[3. Critical Thinking Strategies](#)

[\(2-3 Hours\)](#)

Essentials Of Critical Thinking

[http://www.free-ed.net/free-ed/TextResources/critThink\\_01.asp](http://www.free-ed.net/free-ed/TextResources/critThink_01.asp)

### **1. Critical Thinking Basics**

[Topic Overview](#)

[What You Should Learn](#)

[Frequently Asked Questions](#)

[Tips on Applications](#)

[Important Terms](#)

[True/False Quiz](#)

[Multiple-Choice Quiz](#)

### **2. The Anatomy and Varieties of Arguments**

[Topic Overview](#)

[What You Should Learn](#)

[Frequently Asked Questions](#)

[Tips on Applications](#)

[Important Terms](#)

[Multiple-Choice Quiz](#)

### **3. Clear Thinking, Critical Thinking, and Clear Writing**

[Topic Overview](#)

[What You Should Learn](#)

[Frequently Asked Questions](#)

[Tips on Applications](#)

[Important Terms](#)

[True/False Quiz](#)

[Multiple-Choice Quiz](#)

### **4. Credibility**

[Topic Overview](#)

[What You Should Learn](#)

[Frequently Asked Questions](#)

[Tips on Applications](#)

[Important Terms](#)

[True/False Quiz](#)

[Multiple-Choice Quiz](#)

## **5. Persuasion through Rhetoric: Common Devices and Techniques**

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

## **6. More Rhetorical Devices: Psychological and Related Fallacies**

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[Multiple-Choice Quiz](#)

## **7. More Fallacies**

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

## **8. Deductive Arguments I: Categorical Logic Categorical Claims**

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

## **9. Deductive Arguments II: Truth-Functional Logic**

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

## **10. Inductive Arguments Analogical Arguments**

[Topic Overview](#)  
[What You Should Learn](#)

[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

## 11. Causal Arguments

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

## 12. Moral, Legal, and Aesthetic Reasoning

[Topic Overview](#)  
[What You Should Learn](#)  
[Frequently Asked Questions](#)  
[Tips on Applications](#)  
[Important Terms](#)  
[True/False Quiz](#)  
[Multiple-Choice Quiz](#)

Frontline: CyberWar (How real is the threat of war in cyberspace, and what does the White House know that the rest of us don't? FRONTLINE investigates a new war using embedded malicious code, probes and pings, and other weapons aimed directly at America's power grid, water supply, and transportation systems. Examples include The Slammer (Super Bowl Sunday), Nimda (a week after 9/11), Code Red (summer 2001), and Moonlight Maze (from Russia's Academy of Science). View the entire 52 minute program here in six consecutive chapters.)

| Flixxy   | <a href="http://www.flixxy.com/">http://www.flixxy.com/</a>   |

[Zoomr](#) : Recent startup that is shaping up to take on Flickr. Have just announced they will be increasing monthly limits on free and paid accounts to more than what Flickr offers.

[Vmix](#) : Founded by the people behind MP3.com, Vmix offers photo and video sharing along with the ability to create you own slideshows. A busy-looking site that seems to have quite a bit of traffic.

[Flickr](#) : The daddy of photo-sharing sites, the first in the breed of web 2.0 photo sites, allows you to create galleries, tag photos etc. The biggest in terms of traffic and was acquired by Yahoo.

[Fotki](#) : Founded in 1998 Fotki has been around for ages in relation to a lot on this list, it offers a range of services such as photo-sharing, photo-printing, photo-selling and blogging.

[Fotolog](#) : Large photo blogging community - claims to have a staggering 1.5 billion page views and receive over 20 million unique visitors per month which is backed up by its alexa ranking of [33](#).

[Fototopic](#) : Another site that has been around a few years; since 1999. Offers gallery services and also prints and your photos on to various gifts within their store.

[Glowfoto](#) : A basic photo sharing site that offers galleries and the option to upload via mobile phone. 25million photos have been uploaded by 73k users so far.

[MyPhotoAlbum](#) : Photo sharing with the usual features and also offers printing; currently offering 15 free prints to new users. Has had 32million photos uploaded so far.

[Panoramio](#) : Photo storage and a mapping feature via a mashup with google maps. Each photo gets linked with the place it was taken. 2GB storage included for free.

[Ringo](#) : No, not the beatle but a rather smart-looking site which combines photo sharing with social networking. Every week you get your friends newest photos and comments delivered to you. One of the better-looking sites.

[Zoomonga](#) : A nice-looking site but the rather stingy 20mb of uploads per month on the free plan could be why it doesnt look exactly busy.

[Webshots](#) : Another huge site owned by Cnet. Provides the usual photo sharing features plus a desktop utility for organising photos, prints on gifts etc.

[Photobucket](#) : The favourite of myspace users, provides free and paid accounts for image hosting and video hosting along with the ability to create a flash slideshow. Have harnessed viral marketing to a tee and provide most of the image hosting for myspace and other social networks.

[PBase](#) : Not the easiest on the eye but seems to have gained huge traffic since it was established in 1999. Very basic features and a huge member's forum.

[OrangePics](#) : A basic site that emphasizes ease of use and safety of your photos. Currently offering your first full year for free, after which is an annual charge of \$24.95.

[Phanfare](#) : Offers unlimited storage for a monthly fee of \$6.95 to host your photos and video clips. Also provides downloadable organisation software.

[SmugMug](#) : Really nicely designed site that offers accounts from \$59.95 per year with a free trial. The user galleries are nice to look at and you can include video in these.

[Dropshots](#) : Front end looks nice and clean and the features are up to scratch but viewing the sample gallery lets the site down - cluttered and ugly.

[Slide](#) : Another site that has taken advantage of myspace to create viral marketing. Users upload photos and create slideshows using the editor and then post them to their profile or blog etc. Controls are nice and easy to use, will do well unless myspace bring out their own slideshow tools.

[Photosite](#) : Provides photo sharing but you get the impression the site is more about selling prints and gifts than that. looks a touch too corporate although the drag and drop tools sound impressive.

[23HQ](#) : Nice site which provides completely free accounts, basic features such as galleries, tagging and photogroups; where you can form your own community of friends and chat and share each other's photos.

[Kodak Gallery](#) : Goes under the name of a photo sharing site but looks very corporate and set up to flog merchandise rather than provide a nice website experience.

[Zoto](#) : Nice site with good features such as geo-tagging, photo blogging and the usual community features such as browsing by interest. Free version with the option to upgrade to a pro account for \$24.95 per year.

[Snapfish](#) : Another corporate site run by Hewlett Packard, offers photo sharing and digital prints of your snaps.

[Flukiest](#) : Photo, Video and music sharing with the ability to upload via mobile phone or a personalised Flukiest email address.

[Imagestation](#) : Sonys photo sharing offering, much better looking the Kodaks or HPs. Usual features with printing options but also the ability to upload via your psp.

[PictureTrail](#) : Another site that is combining photo sharing and social networking. Provides myspace style customisable profiles and some nice flash widgets to create 3d cubes of your photos, heart shapes, slideshows, screensavers and loads more bits and bobs.

[Hello](#) : Great domain and Googles offering which is designed to work in tandem with their [picasa](#) image organising software which they acquired. Picasa is great piece of software and helps you find pictures you had long forgotten about. it seems that hello allows you to send images to your friends like and instant messenger or to your blogger blog.

[Parazz](#) : Parazz is a nifty looking site which offers drag and drop uploading, slideshow creation with the option to add a soundtrack, camera phone uploads and a colour theme editor. They provide a free version or pro version for \$29 a year.

[Zeec](#) : Clean looking site with nice user galleries, offers the choice of uploading via your pc or mac with their software or via mobile phone.

[Funtigo](#) : A site offering photo scrapbooks, users can deesign each album or Web page the way you they like by adding text, backgrounds, clipart and animated text to their pages. Nice features and as myspace found out, people like to customise their pages.

## Mapping and Related Material

US Geological Survey manages and distributes many kinds of maps. The following links provide a wealth of information about USGS maps.

Information about the many kinds of US Geological Survey maps available is at

<http://erg.usgs.gov/isb/pubs/booklets/usgsmaps/usgsmaps.html#Top>

Information about US Geological Survey topographic (topo) map symbols is at

<http://erg.usgs.gov/isb/pubs/booklets/symbols/>

An explanation of map scale is at

<http://erg.usgs.gov/isb/pubs/factsheets/fs01502.html>

Information about US Geological Survey topographic map standards is at

<http://nationalmap.gov/gio/standards/>

More information about map datums on USGS topographic maps is available at the following

links: <http://geology.er.usgs.gov/eespteam/GISLab/Cyprus/datums.htm>

<http://www.ngs.noaa.gov/faq.shtml#WhatNAD>

USGS Store [http://store.usgs.gov/b2c\\_usgs/b2c/start/\(xcm=r3standardpitrex\\_prd\)/.do](http://store.usgs.gov/b2c_usgs/b2c/start/(xcm=r3standardpitrex_prd)/.do)

The Intelligence Network: IntellNet is dedicated to providing individuals and groups aggregated news and documents from around the world in an easy-to-access and understand format. Founded in early 2000 as a private project to more easily disseminate information, during the 4 years since its creation IntellNet proved itself to be a great source of knowledge. With today's re-launch, The Intelligence Network will stand upon the shoulders of giants in order to see further and push higher; expanding upon the very foundations of the U.S. Open Source Intelligence (OSINT) community. <http://www.intellnet.org/>

Sources And Methods

<http://sourcesandmethods.blogspot.com/2008/01/bahraini-foreign-minister-speaks-iiss.html>

SITE Intelligence Group Monitoring Service ("By monitoring terrorist and extremist websites and penetrating password-protected Al Qaeda linked sites, SITE provides a state-of-the-art intelligence service to both practitioners and analysts to understand the adversary." - Rohan Gunaratna, Author, Inside Al Qaeda: Global Network of Terror (Columbia University Press) Studying the primary source propaganda, training manuals, and chatter of terrorists offers insight into terrorists and their activities that can not be obtained anywhere else. Failing to monitor terrorist propaganda is a failure in intelligence. To fulfill this need, the SITE Intelligence Group offers its Monitoring Service, which provides numerous daily translations of terrorist propaganda and multimedia from primary source terrorist websites.)

STRONG ANGEL TOOZL <http://www.strongangel3.net>

## **Open-Source Technology Alternatives**

Open-source technology alternatives. All of the following are free for download online.  
(Note there are no virus or spyware protection programs listed; commercial companies like Symantec and McAfee still offer the best security for a Windows computer).

### **< Linux Ubuntu >**

Operating system as an alternative to Microsoft Windows: linux.org

Pros

- Apple-esque simple desktop design.
- Fewer security concerns than Windows.
- Great for amateur programmers.
- Can run on very old computers without problem.

Cons

- Many programs, notably iTunes and most computer games, aren't compatible.
- Interface takes some getting used to for past Windows users.
- May require you to completely erase old files on your computer.

Counterpart: Microsoft Windows Vista Home Basic, \$200 in stores.

### **< Firefox >**

Internet browser as an alternative to Microsoft Internet Explorer: mozilla.org

Pros

- Loads individual pages faster.
- Fewer spyware infections or pop-up ads than Internet Explorer.
- Add-ons provide customizable look and features.

Cons

- Takes longer to start.
- Requires more room on the computer to run.

- Some Web sites, made specifically for Explorer, won't load at all.  
Counterpart: Microsoft Internet Explorer 7, free online at microsoft.com.

### < OpenOffice >

Productivity suite as alternative to Microsoft Office: [openoffice.org](http://openoffice.org)

Pros

- Counterparts to all Microsoft Office programs.
- Ability to save documents in many file formats (including all Microsoft Office formats).
- Simple interface.
- Good for college students or other workers outside the United States.

Cons

- Not as graphically polished as Microsoft Office.
- Some infrequent compatibility issues with other file formats.
- Not the best for professional work in the United States.
- Takes much longer to load than Microsoft Office.

Counterpart: Microsoft Office 2007 Home and Student 2007, \$150 in stores; Microsoft Access 2007 not included, comes new at \$230 or upgrade at \$110.

### < Thunderbird >

E-mail client as alternative to Microsoft Outlook: [mozilla.org](http://mozilla.org)

Pros

- Support for e-mail hosts nearly identical to Microsoft Outlook.
- Typical clean Mozilla interface.
- Can connect directly to Mozilla calendar program Lightning.

Cons

- No default connection to calendar program.
- Can't synchronize with Palm-style devices like Outlook can.
- Fewer features than Microsoft Outlook (but more than Outlook Express).

Counterpart: Microsoft Outlook 2007, packaged in some bundles with Microsoft Office or \$110 separately.

### < Gimp >

Photo editor as alternative to Adobe Photoshop: [gimp.org](http://gimp.org)

Pros

- Interface very similar to older Photoshop editions.
- Lots of features and capabilities.
- Good for thrifty amateur photographers.

Cons

- Fewer features than latest Photoshop.
- Not for extremely serious amateur or professional photographers.

Counterpart: Adobe Photoshop CS3, upgrade online at \$200 or buy new at \$650.

## **Organized Crime**

Criminal Justice Resources <http://www.lib.msu.edu/harris23/crimjust/orgcrime.htm>

Organized Crime Web Links [http://www.yorku.ca/nathanson/Links/links.htm#General\\_Overview](http://www.yorku.ca/nathanson/Links/links.htm#General_Overview)

ChaCha

<http://www.chacha.com/>

Dog Pile

<http://www.dogpile.com/>

Zuula (takes advantage of 16 search engines)

<http://www.zuula.com/>

Planetsearch (takes advantage of 16 search engines)

<http://www.planetsearch.com/>

GoshMe (You may not know but there are more than half a million search engines out there on the Internet, with exclusive content and features. GoshMe will be the way to discover them, and even better, the key to know when and how to use them.)

<http://www.goshme.com/login.jsp>

Yahoo Short Cur Cheat Sheets

<http://help.yahoo.com/help/us/ysearch/tips/tips-01.html>

WayBack Machine

<http://www.archive.org/index.php>

Search Engine For Arabic Speakers

<http://www.ayna.com/>

SearchMash

<http://www.searchmash.com/>

CrossEngine

<http://www.crossengine.com/>

Factbits (A search engine that is calibrated for searchers rather than for surfers. I don't want to find the hottest web site about Britney Spears; I want information on best practices for call centers, or background on the California mortgage industry.) <http://www.factbits.com/>

Intelways (Intelways.com, formerly CrossEngine and before that, mrSAPO, isn't a metasearch engine; you type in your query and then select which search engine to use. Intelways provides one-click access to around 300 different search tools, organised by broad channels.) <http://www.intelways.com/>

Alt Search Engines <http://altsearchengines.com/archives/november-2007.pdf>

Goshme <http://beta3.goshme.com/>

Taya It (Arabic) Tayait offers their users the ability to search in the following language modes:

Morphological Search: Results include all inflections of the keyword. Expanded Search: Results include all derivatives of the keyword. Synonyms (Thesaurus): Return all synonyms and dialectical variants.

Cross Language: The ability to input English words to search through Arabic Documents Phrase: The ability to link multiple keywords more loosely or tightly.

YamLi (Arabic) <http://www.tayait.com/>  
<http://www.yamli.com/>

Ayna (Arabic) <http://www.ayna.com/>

Araby (Arabic) <http://www.araby.com/>

Le Moteur (French) <http://lemoteur.orange.fr/>

Carrot Clustering Engine An open source search-results-clustering engine, just recently out in beta. In a nutshell, it takes search results, analyzes them and, on the fly, creates groups of the most common concepts or terms from those results. Since this is all done by algorithms rather than by humans, expect the odd result every once in a while. (BatesInformation Services, [www.BatesInfo.com/tip.html](http://www.BatesInfo.com/tip.html))

<http://demo.carrot2.org/demo-stable/main>

Tianamo has developed a visually search engine that represents your search results as a terrain map. You decide if it has utility. <http://search.tianamo.com/index2.php>

## **Social Networking**

Social networking sites can be especially useful for the analyst. Many of the sites are used by terrorists, gangs, criminals and others with less than honorable intentions. Careful analysis of these open source worlds can yield intelligence you never knew existed. Like a jigsaw puzzle, you may have to visit several sites (as the enemy does to post bits and pieces of information so as to not leave a trail) to bring it all together. This is the heart of analysis: bringing it all together to monitor the beat. More to be added later.

Top Ten <http://social-networking-websites-review.toptenreviews.com/>  
List Of Social Networking Sites [http://en.wikipedia.org/wiki/List\\_of\\_social\\_networking\\_websites](http://en.wikipedia.org/wiki/List_of_social_networking_websites)

## **Software For The Open Source Analyst**

Granted there are many units out there that do not have the budget to buy or subscribe to expensive analytical software, but this should not stop the analyst from doing his/her work. There are abundant resources of freebies that when used in conjunction with each other provide just as powerful analytical capabilities. I actually view this as a heavy **plus**. When we use expensive commercial versions of analytical software that give instantaneous analysis/gratification we tend to depend too much on the outcome and in many cases take the results for granted. When we do this we cheat ourselves from doing our own critical thinking and critical analysis. However, by taking advantage of the free community versions and using them together we force ourselves to do more critical thinking/analysis because we are trying to determine what information to input into one program based on the output of another program.

Analysis Of Competing Hypotheses (ACH), Analysis of Competing Hypotheses is a simple model for how to think about a complex problem. It takes you through a process for making a well-reasoned, analytical judgment. It is particularly useful for issues that require careful weighing of alternative explanations of what has happened, is happening, or is likely to happen in the future. It helps you overcome, or at least minimize, some of the cognitive limitations that make prescient intelligence analysis so difficult. ACH is grounded in basic insights from cognitive psychology, decision analysis, and the scientific method. It helps analysts protect themselves from avoidable error and improve their chances of making right calls. A free download. <http://www2.parc.com/istl/projects/ach/ach.html>

Silobreaker (for those familiar with Analyst Notebook, I think you'll like this)

<http://www.silobreaker.com/>

Evolution (It has applications in forensic investigations, law enforcement, **intelligence operations**, identity fraud, and identity verification processes). Download the free community edition. It is not as powerful as the commercial version, which is also very expensive, but has great utility when used in conjunction with other free sites like Silobreaker. <http://www.paterva.com/web2/>

A Periodic Table of Visualization Methods (If you've ever wondered how to model something, or were looking for new ideas for segmenting and presenting complex concepts, this is an incredible online resource. A neat graphical explanation and example of each "element" (ex; a cycle diagram) appears as soon as your cursor scrolls over them. For instance, they've color-coded their categories: data, metaphor, concept, strategy, information, and compound visualisation techniques. As if that were not enough to spark your brain, the creators also provide clues as to whether the model works best for convergent or divergent thinking, and whether it is more for an overview vs. detailed perspective.)

[http://www.visual-literacy.org/periodic\\_table/periodic\\_table.html](http://www.visual-literacy.org/periodic_table/periodic_table.html)

Sentinel Visualizer (for those of you who have experience with Crime Link and Analyst Notebook this one should be quite interesting. You can download a 45-day fully functional with all the bells and whistles copy and take it for a spin, and at the same time train yourself to use the software. It may come in handy down the road and you can always say you know how to use it) <http://www.fmsasg.com/>

- The Best Ever Freeware Utilities <http://www.techsupportalert.com/>  
Ideas Worth Spreading: Imagine what the open source analyst has at his/her disposal with this type of technology. View the video and see what I mean <http://www.ted.com/index.php/talks/view/id/129>

TouchGraph Google Browser (The touch graph google browser reveals the network of connectivity between websites, as reported by Googles database of related websites)  
<http://www.touchgraph.com/TGGoogleBrowser.html>  
SquidMat (The program compares two or more courses of action based on two or more evaluation criteria. The user arranges the evaluation criteria in descending order of importance and tells the program how much more important each criterion is than the next lower criterion. These importance ratings are used to calculate weights for each criterion. SquidMat takes user-supplied values for each course-of-action/criterion combination and converts them to Z scores. Using the criterion weights, the program calculates weighted sums for each course of action. The course of action with the highest weighted sum is considered to be the best. <http://faculty.tamu-commerce.edu/jmstauffer/Squidmat/>

Study Of Terrorism And Response To Terrorism (START) The Global Terrorism Database (GTD) is an open-source database including information on terrorist events around the world since 1970 (currently updated through 2004). Unlike many other event databases, the GTD includes systematic data on international as well as domestic terrorist incidents that have occurred during this time period and now includes almost 80,000 cases. For each GTD incident, information is available on the date and location of the incident, the weapons used and nature of the target, the number of casualties, and -- when identifiable -- the identity of the perpetrator.

## Taking Advantage Of Search Engines To Do Your Work

My favorite search engines, and I'm sure you have your favorites, are the Copernic Suite followed by Google and then others. I use them extensively and use them to my advantage when doing research and I just don't have the time to sit in front of the computer and type in all the keywords. First let me start with the Copernic Suite. It is comprised of [Copernic Agent Professional](#), [Copernic Tracker](#) and [Copernic Summarizer](#). Tracker and summarizer are exactly what the titles imply. The tracker keeps track of websites and alerts you when there are changes to it. Summarizer will take an article and summarize it to a more manageable article; and you determine the number of words in the summarized article. The following applies to copernic agent professional and how to customize it to work for you.

You'll notice on the graphic below how I have formatted my copy. On the right side is a box where folders are created as I have done. In the top center are the keywords I used for the Iran folder in the box at right. I have programmed the engine to do automatic searches at 0800 every day (by this time I have had my first cup of coffee and just waiting for all the results to come in). You also will notice that on the search term "Iranian military capabilities" there is a number 24 in parenthesis. These are the new results that came in at 0800, so you will always know about new results. Just below the box with the keywords are all the hits that came in. The green check mark indicates that it is a valid link. Now look at the left hand side in the quick search box and you should notice that I have 1005 search engines enabled. With these many search engines enabled you should be able to pin down what you're looking for.

The screenshot displays the Copernic Suite interface. At the top, there are menu options: Favorites, Tools, Window, Help. Below the menu is a toolbar with icons for Analyze, Save Pages, Filter, Find in Results, Browse, and Summarize. A search bar contains the text "iranian military capabilities". Below the search bar is a table of search results:

| Search Term                   | Exact phrase | Category  | Results             | Last Update          |
|-------------------------------|--------------|-----------|---------------------|----------------------|
| iranian military weapons      | Exact phrase | Terrorism | 68 results          | 8/30/2007 1:23:45 PM |
| iranian websites              | Exact phrase | Terrorism | 303 results         | 8/30/2007 1:38:06 PM |
| iranian naval capabilities    | Exact phrase | The Web   | 23 results          | 8/31/2007 8:19:34 AM |
| iranian military capabilities | Exact phrase | The Web   | 40 results (24 new) | 8/31/2007 8:19:48 AM |

On the right side, there is a "Folders" panel with a tree view containing the following folders: Africa, Al Qaeda, Drug War, HUMINT, IEDs and EFPs, IMINT, Iran, MASINT, OSINT, and SECRET.

Below the search results, there is a "Quick Search" panel on the left and a "Result list" panel on the right. The "Quick Search" panel shows a search bar with "Advanced" selected, and a category list with "1005 engines enabled". The "Result list" panel shows search results for "iranian military capabilities" with a green checkmark indicating a valid link. The results include:

- USPACOM Speeches and Transcripts** (81% relevance): ... warned of the growing shadow of Iranian influence in the Middle East region. ... Iranian support for terrorism and sectarian violence ...
- Iran Navy** (80% relevance): GlobalSecurity.org is the leading source for reliable military news and military information ... Navy. The Iranian navy has always been the smallest of the three services, having about 14,500 ...
- NAVAL POSTGRADUATE SCHOOL** (79% relevance): 28 oil infrastructure on its eastern coast. 58 Damage or destruction of these facilities would cause severe disruptions in the Kingdom, possibly leading to a major crisis. **Iranian naval capabilities** ...

22 results (plus 1 filtered)

Let's now look at Google and see how it can be customized to work for you. What you're looking at now is the traditional page. On the upper right is the "sign in" link. Click on this link to establish an account. Once you establish an account click on the news link to go to the personalized news page.

Clicking on the news link brings up the following page. You'll notice on the left hand side where I have established all keywords of interest to me. I have included all the classical "INTS" along with some others of interest. Clicking on a keyword, for example "explosively formed projectiles", brings up the latest search on that term. I use the same keywords in Copernic above because the results are not always the same for both search engines. By using two search engines to do my bidding I stand a better chance of getting a plethora of results and thus more solid news from around the world.

## Terrorism Threat Map 2005 Map Is Hyperlinked To The Web

## Terrorism Threat Map 2007 Map Is Hyperlinked To The Web

## Political And Economic Risk Map 2007 Map Is Hyperlinked To The Web

This map is shown because terrorism has always had some type of correlation to the economic and political health of certain countries. It may help the analyst determine where terrorist acts are likely to take place. Obviously the risk map will not tell with any degree of certainty where the next incident will occur but the analyst can make some predictions by looking at current instabilities in certain parts of the globe.

## Global Health Care Capabilities Map Is Hyperlinked To The Web

Tricks Of The Trade For The Open Source Analyst  
Looking For Old Information  
By Etan Horowitz  
*The Orlando (Fla.) Sentinel*

Things move so fast on the Internet that sometimes the information you are looking for has been removed or changed. Using Google's Cached Links and the Internet Archive's Wayback Machine can help you find what you are looking for even if the content is no longer online.

1. If you know that the information you are searching for is no longer online, go to Google.com.
2. Enter as much information as you can into Google's search field and hit enter.
3. When your search results appear, find the result with the most appropriate description and click on the link at the bottom left of the result that says "Cached." This will open a snapshot of the Web page that Google took as it was indexing it.

Clicking on the cached link may also be useful if you ever click on a search result link that doesn't work.

4. If you don't know exactly what you are looking for or are curious about a previous version of a Web page, go to [web.archive.org](http://web.archive.org) to search the Internet Archive's Wayback Machine, an archive of 85 billion Web pages dating back to 1996.
5. Type the URL of the Web site you want to see and click "Take Me Back." This will bring up a collection of archived pages from that Web site, organized by year.

Cached Links may not be available for all Web sites and less popular Web sites may not be included in the Internet Archive Wayback Machine.

## Recommended Search Tips

### \* \* \* Google Can Do That? \* \* \*

\* Google lets you search for a range of numbers, in any format. To include a number range in your search query, type in the lower and upper numbers, separated by two periods - e.g., 15..50 I had a chance to try out this feature in a real-life search; I wanted to find a set of wireless headphones on Amazon.com costing between \$50 and \$100. I typed in the query (wireless OR cordless) headphones \$50..\$99 site:amazon.com and, sure enough, I retrieved a wide selection of wireless headphones within my price range.

Note that Google is smart enough to recognize decimal points - some of the items I retrieved weren't an even dollar amount but were, for example, \$57.83. This feature could also come in handy if you are looking for a mention of a range of years.

\* Speaking of date-searching on Google, you can limit your search to only those pages added or changed within the past [whatever] days. This can be a useful feature if you re-run a search regularly; just limit your search to the pages added or modified since you last ran your search. You can do this not by adding text in the search box but by modifying the search results page URL by adding the following text to the end of the URL and clicking [Search]: &as\_qdr=dn (where n is the number of days you want searched) So, for example, to limit my search to the last 18 days, I would add &as\_qdr=d18 to the end of the search results page URL.

Keep in mind that this isn't a perfect date-limiting search. Some web content management systems automatically refresh a web page frequently, without necessarily making any changes to the page. Those pages will have a recent date but the content within them may have been unchanged for months.

\* If you are based in the US, you can search for local companies through your cell phone, regardless of whether or not your phone has web capability. If you call 1-800-GOOG411 (1-800-466-4411), you will be asked to say the city and state you want information on - Boulder, Colorado, for example - then you say the type of business or specific business name you want - for example, "book store" or "Barnes and Noble". A text-to-speech program will read you the top eight results from its local search (<http://local.google.com>). If you want, Google can automatically dial any of the first eight businesses' phone number, or you can ask to have the address and phone number read to you.

You can also get quick answers to simple queries by texting Google from a US cell phone. Send a text message to 466 453 (GOOGLE) and then type your query in the text box and send it. Within seconds, you will receive a text message with one of Google's Quick Answers. The default is for Google to take your query and attempt to find a Quick Answer. If you want a search of the web, put the word web at the beginning of your search, such as web avian flu. This will return you a text message with a snippet of the first search result, along with a link to mobile-formatted page of the search results. See <http://sms.google.com> for more information on this service.

I recently discovered [Intelways](#), a nifty way to search a number of search engines sequentially. It's not a metasearch engine; it lets you click from one resource to another. Its main claim to fame is that it categorizes the tools by broad type of search -- general, images, video, news, social (blogs, social networking sites, social bookmarking sites, etc.), file-type searching, reference, academic, business, tech and (natch) shopping. (Source: Bates Information Services, [www.BatesInfo.com/tip.html](http://www.BatesInfo.com/tip.html) )

## ***PowerSet.com***

We have a new player in the semantic search arena; "semantic search" refers to the idea that a better way to find the most relevant material is to not just look at word frequency, location, links to a page and so on but to understand the sense of what is being asked and the sense of what is on web pages, and then to match the most applicable pages. For example, if I typed in a query for *stock*, a semantic search engine would see that this was in the context of livestock, and would find other pages that have to do with animals on farms rather than about shares of ownership in a company, flowers, or racing cars.

[PowerSet](#) uses a technology that attempts to mine meaning out of web pages -- specifically, [Wikipedia](#) articles. This isn't a general-purpose search engine, but it is a tremendous tool if you are looking for information on a subject that spans a number of Wikipedia articles, or that has a number of meanings. Take "Barack Obama" as an example. There are [thousands of articles](#) that mention Obama -- the Wikipedia article specifically about him, as well as articles about politicians who have endorsed him, his early career, the roles of race and religion in the US presidential campaign, and so on.

Rather than going through all of those entries, including the extensive article specifically on Obama, head over to PowerSet and you will get a [single search result](#) that pulls together what it judges to be the most relevant information about Barack Obama. There is a nice summary of who he is, the key facts about his career, and a relevance-ranked list of Wikipedia pages that mention him.

What I find particularly interesting is the "Factz" section of the page, which attempts to pull together *significant statements about* Barack Obama in the Wikipedia articles. So, for example, the Factz for Barack Obama include information that he introduced the following pieces of legislation:

- Iraq War De-Escalation Act of 2007
- Response Act
- Pandemic Preparedness
- Transparency Act
- Federal Funding Accountability

While that isn't a comprehensive list of the pieces of legislation he has introduced, these are probably the most significant ones, since this list includes only legislation that was mentioned in Wikipedia articles.

PowerSet is best used for those searches that cover a number of topics or areas. It's not perfect, and it only searches Wikipedia, but I find it an exciting new approach in the efforts of search engines to make sense out of web content.
