25X1C

On the fourteenth of February, you wrote me relative to the interest [redacted] in the use of low frequency sound detectors for the collection of guided missile intelligence. As I believe I mentioned earlier, I sent this on to our Guided Missile Intelligence Committee in order that we could get the views of all interested [redacted] 25X1C agencies on the subject. The GMIC review of this problem is now completed.

25X1C

As you know, [redacted] has long been interested and has pursued developments in the [redacted] as applied 25X1D to guided missiles. Experiments using these techniques are presently 25X1D underway at White Sands in parallel with the experiments [redacted]

25X1D

[redacted]. We shall keep you informed of the results of these tests.

25X1D

As a result of the discussions within GMIC, we have concluded that [redacted] is a feasible mechanism for the

collection of certain elements of guided missile intelligence and feel that there is a reasonable prospect of producing suitable scientific aids for such collection. I can assure you that various groups in

25X1C

 intend to further pursue developments in this promising field and we will keep you informed of significant developments through our established channels. However, if you have any ideas for independent approaches, we would certainly urge you to pursue them and we would be glad to cooperate in any way possible.

Sincerely yours,

25X1A
