

Incl. re telepathy. let Mr Price again of his meeting before any data is given him.
Suggested Protocol for Operational Remote-Viewing Exercise

SG11 *two variations: (1) that [redacted] make a verbal M/R before going to SRI on all that he saw - include what*
SG11 *the installation & give it to Mrs Price; (2) that all [redacted] transcripts/drawings/sage models be*
sent to DC for evaluation by NPIC before [redacted] goes to SRI
Experiment: Remote viewing, operational.

ILLEGIB Target: Technical facility. SG11

ILLEGIB Purpose: To obtain technical information sufficient to differentiate
SG11 among possible alternative technical processes of interest.

SG11 Plan: Carry out a remote-viewing experiment on client-designated
operational target of interest with minimum information
supplied to subject (compatible with designating target
unambiguously).
Mr. P. Price
at SRI
8-12 July, 1974

SG11 Program: (a) Experiment is to be carried out with participation of
person knowledgeable of structure of target facility
and technical processes of interest.

SG11 *Provide coordinates,* (b) Provide viewer with target location, by street map
locate on map, no drawings if possible, and provide viewer with picture or drawing
or pictures for first of target facility containing only enough information to
phase. permit visual recognition during target acquisition.

SG11 *[redacted] will not be* (c) Viewer moves into real-time viewing. Knowledgeable
physically present, will participant listens to viewer description, lightly
evaluate tapes, transcripts questioning if necessary, in an effort to calibrate
after the sessions without viewer description on the basis of information known
confronting Mr. Price a priori to participant but not to viewer.

SG11 *Provided [redacted] judges* (d) Move into phase of more leading questioning, if necessary,
initial response contains again providing as little cueing as possible so as to
some real information, maximize uncued information flow from viewer. Purpose
SG11 *"d" will be implemented* of this phase is to permit viewer to originate freely
and Price made writing while being guided into area of technical interest. This
of U.S. Government Intelligence is to permit relevant but unprejudiced viewing on the part
and [redacted] role. of the viewer and continuing calibration on the part of
the knowledgeable participant.

SG11 *broad dist. of initial* (e) Break operation of real-time viewing at this point.
complete - 4 coordinates Depending on results, provide viewer with minimal
at 10%+ accuracy then additional information, e.g., floor plan, process of
2 more iterations dist. interest, etc., to permit two-or three-day period of
Dist. of success of 1st try relatively unbiased but focussed generation of spontaneous
to have 1st 2nd activities. impressions by viewer.

ILLEGIB

- (f) Discuss data to date with viewer, and then resume real-time viewing, providing viewer with additional known information in order to maximize possible information retrieval, recognizing that the additional information supplied to the viewer at this point is at the cost of calibration within the experiment.
- (g) If and when appropriate, follow experiment with evaluation as to quality of results (to degree possible, recognizing issues of sensitivity).

SG1I

9 July

[REDACTED] will arrive Palo Alto, Ca & be available for evaluating the first data. Whenever data is judged to contain a significant amount of unambiguous data, [REDACTED] will introduce himself as government intelligence and assume Mr Price of serious interest.

SG1I

10-12 July

Will continue to question Mr. Price and cue as necessary to be assured he has located the exact target building. ~~When~~ If and when Mr. Price has located exact target, he will be asked questions provided by [REDACTED]

SG1I

after test, transcript will be provided to NPIC to score all physical plant descriptions.

- a) unambiguously correct
- b) ambiguous
